PROFESSIONAL SUMMARY

Strategic Technical Program Manager with 10+ years directing cross-functional engineering initiatives across cloud infrastructure, security compliance, and customer-facing mobile platforms.

TECHNICAL SKILLS

Program Management: Cloud Migration Strategy

Governance: SOC 2 & ISO 27001 Compliance

Executive Skills: Cross-Functional Leadership

WORK EXPERIENCE

Director of Technical Program Management @ Enterprise Data Platform Corp

2020 – Present

- Orchestrated multi-year cross-organizational cloud transformation program migrating 140+ legacy business units, 45 petabytes of unstructured analytical data, and 3,200 microservices from on-premise colocation centers to Google Cloud Platform, negotiating contractual vendor commitments that achieved $14.8M in annualized infrastructure savings while guaranteeing 99.995% service uptime throughout migration cutovers.
- Formulated and executed enterprise-wide cybersecurity vulnerability mitigation framework encompassing automated static code analysis, third-party software bill of materials (SBOM) validation, dynamic penetration testing, and zero-trust perimeter enforcement across 28 global engineering offices, resulting in zero critical security audit findings during subsequent SOC 2 Type II and ISO 27001 compliance examinations.
- Standardized agile delivery methodologies, release governance processes, and key performance metric dashboards across 35 independent feature squads, eliminating inter-team blocking dependencies and accelerating feature deployment velocity from quarterly releases to continuous daily production deployments.

Senior Technical Program Manager @ Fintech Solutions Group

2016 – 2020

- Spearheaded end-to-end development and global launch of multi-currency payment settlement engine processing $2.4B in quarterly cross-border trade transactions, partnering with compliance attorneys, liquidity providers, and banking partners across 18 European and Asia-Pacific jurisdictions to ensure full statutory compliance with PSD2 and anti-money laundering regulations.
- Established automated incident management and disaster recovery protocols reducing mean time to detection (MTTD) by 64% and mean time to resolution (MTTR) by 52%, establishing automated telemetry alerting runbooks adopted company-wide.

EDUCATION

B.S. in Industrial Engineering and Operations Research — **Columbia University** 2010 – 2014
